Madinah Operations Intelligence

From municipal reports to proactive decisions

Date Range: 05/10/25 – 05/04/26

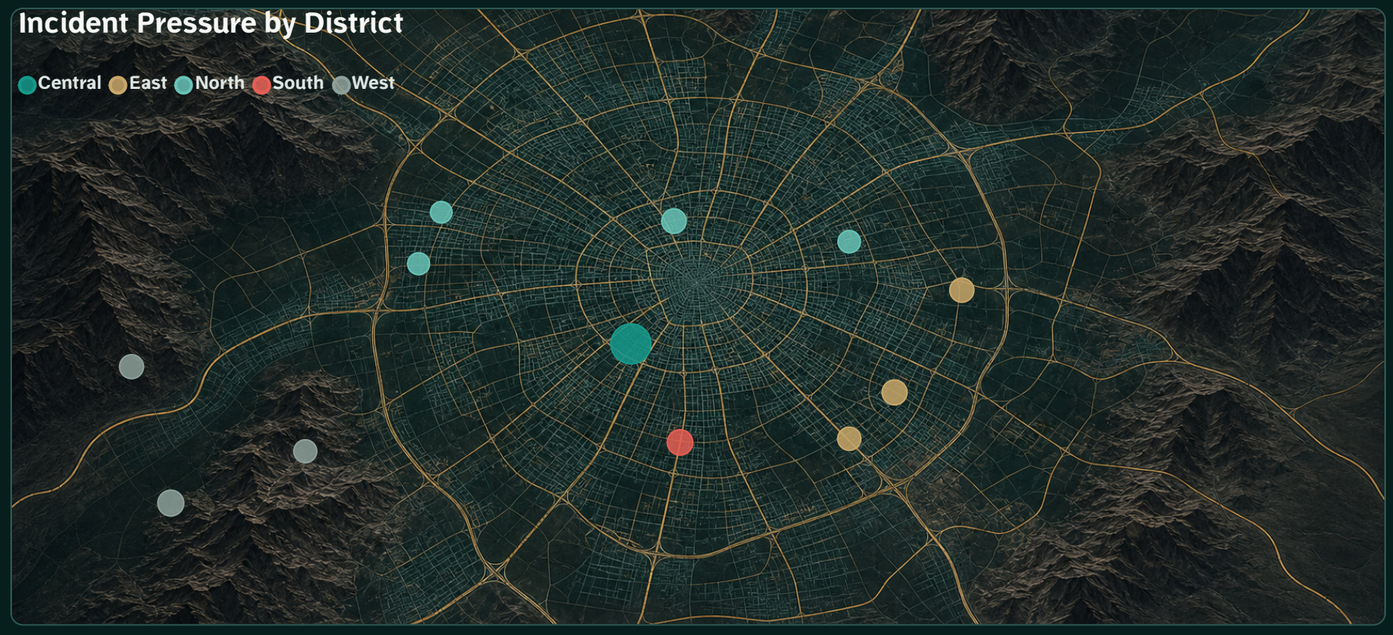

District: All

Category: All

Shift: All

30K	73.5 %	28.3	8.4 %
Incoming Reports	SLA Compliance	Resolution Hours	Repeat Rate

Incident Pressure by District

Operational Insight

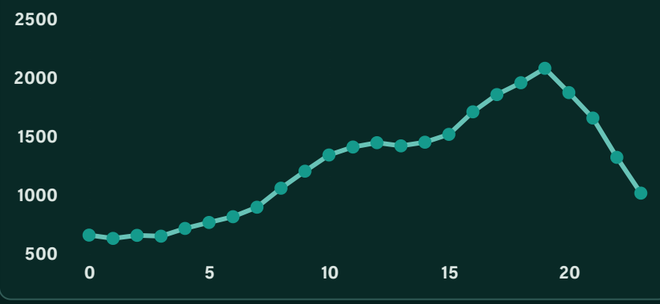

Finding
35.7% of selected reports in All Districts occur in the evening time band (17-22).

Repeat rate: 8.4%

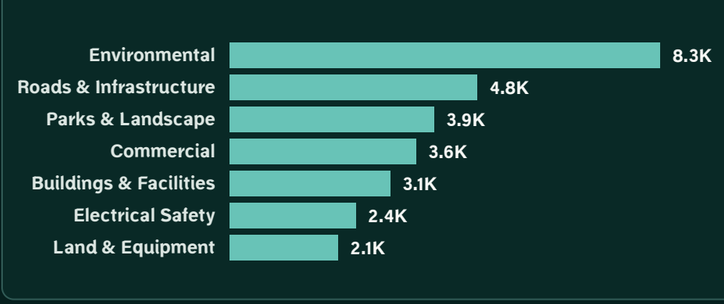

Review demand by shift and repeat locations. Demand concentration alone does not establish operational pressure.

AI-assisted

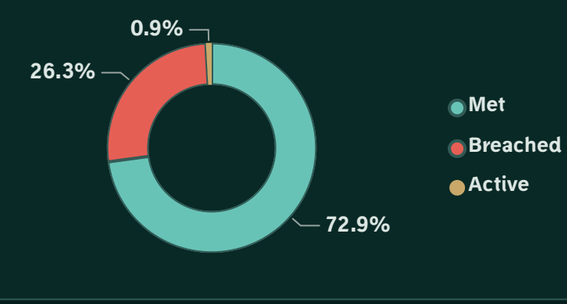

Incident Demand by Hour

Project Overview & Methodology

Business context, data architecture and AI approach

Project Summary

Madinah Operations Intelligence is an end-to-end BI and predictive analytics portfolio project inspired by internship experience at the Municipal Operations Monitoring Center. It transforms synthetic municipal report data into operational monitoring, capacity analysis, SLA risk prediction and explainable decision support.

SYNTHETIC DATA ▪ PRIVACY-SAFE ▪ PORTFOLIO PROTOTYPE

Project Facts

SYNTHETIC DATA WINDOW
05 Oct 2025 – 05 Apr 2026

DOMAIN
Municipal Operations Intelligence

DATASET
30,000 synthetic municipal reports

CORE TOOLS
Power BI ▪ Python
DAX ▪ Power Query

FOCUS
BI ▪ Operations
Predictive AI

From Municipal Data to Proactive Decisions

01 SYNTHETIC DATA
02 POWER QUERY & MODEL
03 BI & DAX ANALYTICS
04 AI RISK SCORING
05 DECISION SUPPORT

Business Problem

- High report concentration near the Central Area
- District demand and nominal capacity comparison
- SLA breaches and repeat-report pressure
- Need for proactive prioritization

BUSINESS OUTCOME
Prototype support for operational review

AI Methodology

Target: SLA breach before resolution

Models: sklearn Logistic Regression + AdaBoost

Selected: AdaBoost Decision Stumps

Time split; 645 unavailable labels excluded

Staffing excluded; feature timing assumptions remain

AI-ASSISTED ▪ HUMAN REVIEW REQUIRED

Model Performance & Governance

TEST ROC-AUC	68.7%
MODEL RECALL	85.3%
DECISION THRESHOLD	24%

Precision 33.6% ▪ 2,861 false alerts
Synthetic ▪ Resolved-only retrospective test
Human review ▪ Not production-deployed
